

# Ever and Current Commercial Tobacco and Nicotine Product Use in the United States: PATH Study Wave 6 (2021)

CRST and CASToR collaborated to present weighted prevalence estimates from analyses of the Population Assessment of Tobacco and Health (PATH) Study Wave 6 (2021). The PATH study is a national longitudinal study designed to be representative of the civilian non-institutionalized US population. This brief presents results from Wave 6, which was fielded March through November 2021, and includes estimated prevalence of ever and current use of commercial tobacco products, as well as current commercial tobacco product use by demographic characteristics.

**Figure 1: Ever and Current Use of Commercial Tobacco and Nicotine Products among US adults, PATH Study Wave 6 (2021), N= 27,916**

Notes: Ever: Regular ever established use. Current: Regular established use and used the product on 1 or more days in the past 30 days.

#### Technical Note

The PATH Wave 6 Public Use Dataset includes derived variables that indicate ever regular established use, current product use, and using a product on one of the previous 30 days, which were used for this analysis. All Cigars includes traditional or large cigars, cigarillos, and filtered cigars. Smokeless includes snuff, dip, and chew. To account for the complex sampling design, variance was estimated using Balanced Repeated Replications, applying a Fay's factor of 0.3, with the Wave 6 Adult-Wave 4 Cohort Single-Wave Weights.
